CEZ´S VIRTUAL POWER PLANT AUCTION WITHIN THE FRAMEWORK OF REGIONAL POWER MARKET DEVELOPMENT

Press conference ČEZ, a. s.
Hotel Palace, 25.7.2006

Alan Svoboda, Managing Director Sales and Trading
Michal Skalka, Director Trading
AGENDA

- Regional power markets development
- Regional power balance development
- Price signal from surrounding countries

- Virtual Power Plant auction
- Auctions in surrounding countries
- Virtual Power Plant auction procedure
GERMAN POWER PRICES AS BENCHMARK FOR THE REGION CONTINUE INCREASING

EEX Forward 2007 (baseload)
EUR/MWh

1 year forward
2 years forward

Forward 2007
58.75 EUR/MWh
(17/7/2006)

Source: EEX
GERMAN PRICES ARE DRIVEN BY GROWING OIL PRICES, CO\textsubscript{2} ALLOWANCES AND SUPPLY DEMAND SQUEEZE

Growing supply / demand squeeze

- Summer power blackouts in Europe happen regularly for several years ... Reserves (of power supply) are low. (HN – Czech Business Daily)

- Shutdowns of power plants in Germany and France enforced by current high temperatures reached several thousands megawatts installed capacity. (Platts)

- Solution to the lack of supply is often import (France – the biggest power exporter – imported approx. 1,000 MW) or initiation of expensive backup units. (Platts,HN)

Source: Bloomberg, ECX
LACK OF POWER IMPACTS THE WHOLE REGION AND SPOT PRICES IN CRITICAL MOMENTS GROW SKY HIGH

EEX and OKO* prices in July 2006
(EUR/MWh, spot)

* OKO = Czech Spot Market, organized by OTE

Source: OTE, EEX, Platts
ČEPS´s actions are required more frequently to maintain stability of supplies

Towards that it must secure enough system tools (reserve capacity)

Imports at 5,000 to 10,000 CZK/MWh
CZECH WHOLESALE POWER PRICES ARE INFLUENCED BY GROWING SUPPLY / DEMAND SQUEEZE IN THE WHOLE REGION AND PRICES IN GERMANY

Wholesale power prices
2000 index, baseload*

EEX 2006 – 47.5 EUR/MWh
EEX 2007 – 58.8 EUR/MWh

Speed of convergence is driven by supply / demand development in the region

Growing price in Germany (due to size of German market) sets the growth trend in the whole region

Czech Rep. 2006 – 36.5 EUR/MWh*

* Exchange rate: CZK / EUR 28.50

Source: CEZ
WHOLESALE PRICES IN THE CZECH REPUBLIC ARE STILL AMONG THE LOWEST IN THE REGION THANKS TO UNRESERVED CAPACITY

Wholesale power price*  
2006, baseload, EUR/MWh

* Comparing 2006 forward price as of 2005, assuming CZK/EUR 28.50

Source: CEZ, Eurostat

Prices in individual regions will converge over time driven by actions of traders and increasing interconnectivity.
THANKS TO GROWTH OF ECONOMY POWER DEMAND IN THE CZECH AND SLOVAK REPUBLICS WILL INCREASE BY 10 TWH

By 2012 Czech consumption will increase by 7 TWh and Slovak by 3 TWh

Significant demand growth is driven by economy growth and FDI (TPCA and Hyundai in CR, PSA in SR)

Based on H1 2006 development Czech consumption is likely to grow even faster

Yoy change in 2007 in Czech and Slovak Republics to reach approx. 2 TWh

Source: CR: ERÚ,ČEZ; SR: UCTE
BY 2020 20 GW INSTALLED CAPACITY WILL REACH END OF ITS LIFETIME

Supply / Demand development in CENTREL (CR, SR, Hungary, Poland), GW*

- CENTREL’s reserve capacity on fast decline
- Significant investments in power generation will be needed to secure self-sufficiency in power
- Mere capacity renewal will not be enough to meet growing demand
- Also availability of Polish coal power is already uncertain

* peak demand vs. net installed capacity

Source: CEZ
SLOVAKIA ALONE WILL LOSE 25% OF POWER IN THE NEXT THREE YEARS WITHOUT REPLACEMENT AND WILL CEASE TO BE SELF-SUFFICIENT IN POWER PRODUCTION

Starting 2007 Slovakia will cease to be self-sufficient in power generation

Yoy capacity decline 14%

Available capacity in Slovakia MW

Source: Platts, CEZ, SE
CEZ WILL MOVE MOST OF ITS EXPORTS TO SLOVAKIA AND HUNGARY

Source: CEZ
FAST DEMAND GROWTH ALONG WITH SIGNIFICANT POWER CAPACITY DECOMISSIONING AT THE END OF THIS YEAR WILL RESULT IN 8 TWH DEFICIT

Yoy change of power balance in CR and SR

TWh

- Elimination of deficit of >8 TWh (approx. 11% CR demand) possible only via
  - imports or
  - initiation of expansive units (till now reserved)

- Both will have a strong impact on regional wholesale price development

Source: Slovak balance change – Platts, Energy in East Europe Issue 82 (decreased by 10% to reflect own consumption); CEZ

Demand growth
J.Bohunice shutdown
Vojany and Nováky shutdown
Demand growth
Tušimice shutdown
Yoy balance change in CR and SR

SR

ČR
ERA OF RESERVE CAPACITY SURPLUS USED FOR EXPORTS OUTSIDE OF CZECH AND SLOVAK REPUBLICS WILL BE OVER IN THREE YEARS

Czech and Slovak power market supply and demand development (TWh)

- Need to operate more expansive and less reliable capacity
- More frequent price spikes and crisis situations including risk of black-outs
- Need for fast new capacity construction

Source: CEZ
DEFICIT CAN BE COVERED BY IMPORTS FROM MORE EXPANSIVE MARKETS OF GERMANY AND AUSTRIA RESP. BY LOWERING EXPORTS TO THESE COUNTRIES

First case: due to problems in Polish grid CEPS provided 400MW emergency support; Second case: due to cumulative 200MW generation fallout

Breach of confirmed contracts should happen only in exceptional cases

- Poland is likely to lower exports in the next year; in July 2006 PSE twice canceled contracted cross border supplies due to lack of generation output
- In 2008 – 2015 complete decommissioning of up to ~5000 MW is expected due to environmental concerns

- Hungary
  - Already in deficit (2005 imports of 16% total consumption, prices at German levels)

- Ukraine
  - Limited export possibilities of Burstyn island of 550 MW exhausted (UCTE technical limits), additionally used for supplies to Hungary

Source: UCTE, CEPS
EU ETS INCENTIVISED CEZ TO ACCELERATE AND INCREASE ITS INVESTMENTS IN GENERATION

CEZ WILL OFFER THE VIRTUAL POWER PLANT ON EQUAL TERMS (SET BY THE ANTITRUST OFFICE) THIS YEAR AS LAST YEAR

**Basic facts**

- Requirement to offer VPP in public auction set by the Antitrust Office as one of the conditions for integration of CEZ + 5 DISCOS

- VPP guarantees third parties access to CEZ generation capacity, including the possibility to place an exact shape of generation diagram

- Total supply 400 MW (with decrease to 240 MW in summer months) divided into 8 blocks with 50 MW

- Minimum output represents minimum electricity off-take in corresponding season so that the real power plants wouldn’t fall under the technical operation minimum

---

**Available capacity of virtual power plant block**

VIRTUAL POWER PLANT IS AGAIN OF A HIGH INTEREST

- Auction participants can be energy traders financially and personally independent on CEZ, a.s.
- Auction is set up by independent auction office Fin-servis, a.s.
  www.fsk.cz

31.5.2006 auction announcement
3.7.2006 start of the registration round
26.7.2006 at 15.00 hodin end of the registration round
2.8.2006 start of the 1st auction round

Number of registered participants

- Auction participants can be energy traders financially and personally independent on CEZ, a.s.
- Auction is set up by independent auction office Fin-servis, a.s.
  www.fsk.cz

2005: 16 requests
2006: 20? requests

Already confirmed 17
EVALUATION AND PUBLICATION OF AUCTION RESULTS WILL TAKE PLACE IMMEDIATELY AFTER IT’S TERMINATION ON 2.8.

- Virtual power plant auction takes place on 2.8.2006 at the premises of Ceskomoravska komoditní burza Kladno, nam. Sitna 3105 organized by independent auction office Fin-servis, a.s.

- CEZ expects further electricity sales until the complete sources exhaustion by auctions

- CEZ will inform about all sales auctions without delay
